# Radioish Pack

Thanks for downloading this pack!

I hope you'll have as much fun as I had while I was crafting those sounds inspired by several Radiohead songs. They don't pretend to be exactly the same, but they were a starting point to let my inspiration grows. The challenge was to only use Wavetable and almost no effects. You'll add yours if you want.
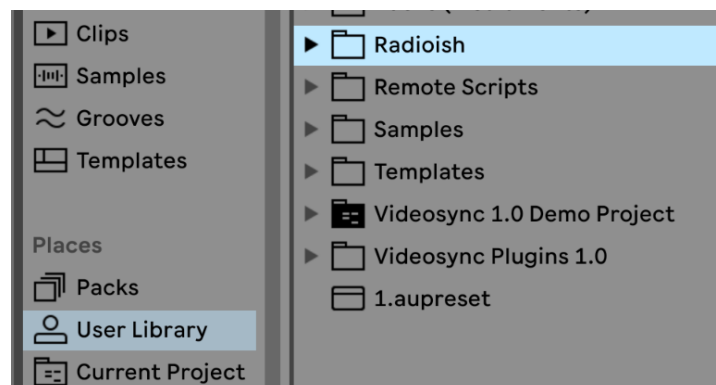

How to install it?

Super simple: Drag and drop the whole "MF-Radioish_Pack" file into your User Library. By default, you'll find it here:

**For Mac users:** Macintosh HD/Users/[username]/Music/Ableton/User Library

For Windows users: Windows: \Users\[username]\Documents\Ableton\User Library

Then, it will automatically appear in your User Library into Live's browser:
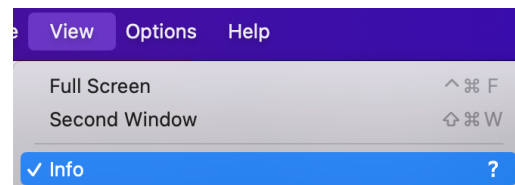

How to use it?

Drag & drop one of the instruments from this pack on a MIDI track and start messing around with the macro controls. For Live 11 users, you'll find a bunch of macro variations that you can see as "presets" for the synth. It can be a good way to find unexpected sounds! Click on the play button close (in the square on this screen capture):

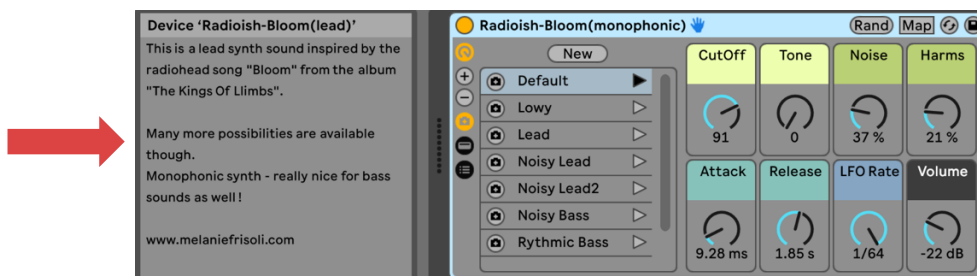

What else?

Open the "info view" (like this) ➡️

and you'll get some messages (sometimes)

Compose music and have fun!
