There are **Stylistic Alternates** of lowercase letters b d g h j k m n p r s t y and z. Also 2 sets for hypen (-) and underscore (_) for some flourishes above and below the words. They have "zero width" so you can type them anywhere in between the letters of the word. In order to enable these, you may individually select and change a letter variation to another by selecting from the Glyphs Window Panel. There are also **Contextual Alternates (final forms)** for a c d e f h k l m n o q r and **Standard Ligatures** for ss, ti and tt.
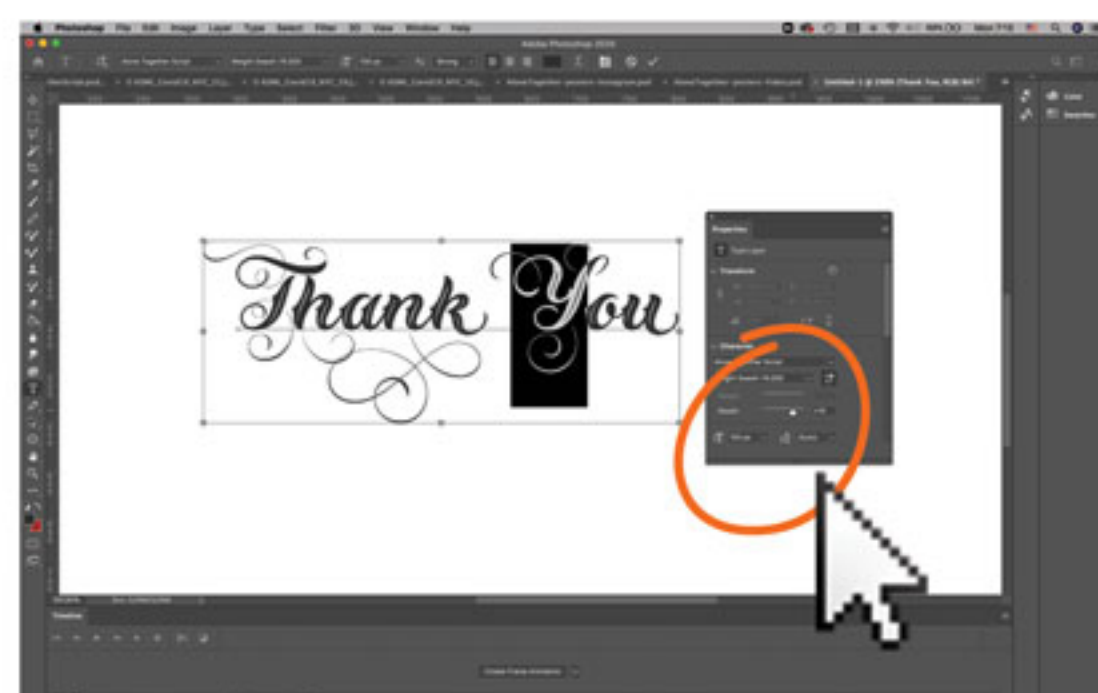

With the type tool, select and highlight the glyph you would like to replace with a varied form ie. alternate. A drop down grid preview will pop open on the bottom right corner, showing all variations possible. Double click on the one you wish to appear. Some lowercase letters have a swash by default, while others have it only in their alternate version so you can switch between and combine them as you like for a better flow

final forms/contextual alternates of lowercase "k" and "u"

Type an underscore (_) or hyphen (-) after the word (or anywhere in between) and select/highlight it with the cursor. You can choose from 2 options from the dwopdown grid.

Swashes have a variable size so you can adjust their lenght to fit nicely together by the slider provided in the
Character window:
